JOB MARKET PAPER

“No Small Potatoes: Agricultural Risk and Investment under Uncertainty”

This paper investigates the role of learning in the use of agricultural technologies by smallholder farmers in low-income countries. I conduct a randomized experiment in Bangladesh to show that a risk-reducing technology can lead farmers to invest more in complementary inputs. Specifically, I use an alert system to enable farmers to take precautionary measures against crop disease. The intervention reduces losses and increases average investment. This result is driven by farmers who learn over the course of the season that they are receiving accurate alerts. These results demonstrate how the effectiveness of an intervention is determined by how rapidly people can learn about its efficacy.
